Committed to Art Educators Since 1901

High-quality instructional materials play an important role in helping students learn, grow, and discover their potential. Davis Publications appreciates the commitment of the Texas Education Agency, review teams, and members of the public to this important work. Their contributions to the Instructional Materials Review and Approval (IMRA) process help support the shared goal of providing Texas students with instructional materials that meet high standards for quality and alignment.

We are proud that all Davis Publications programs submitted for review achieved 100% coverage of the Texas Essential Knowledge and Skills (TEKS) and received high ratings on both the IMRA Fine Arts K–12 Quality Rubric and the Suitability Rubric.

For more than a century, Davis Publications has supported art educators with curriculum and resources that encourage students to think critically, explore ideas, develop artistic skills, and express themselves through art. Our programs are developed by scholars in the field of art education and shaped by field research, interviews with practicing educators, and feedback gathered throughout the curriculum development process. Studio activities are classroom-tested by educators actively using the lessons with their students, helping ensure that learning experiences are grounded in the realities of art room practice.

Our instructional approach emphasizes active, studio-based learning that places students at the center of the creative process. Through creating, responding to, and reflecting on works of art, students develop artistic skills, deepen their understanding of visual concepts, and build confidence in their creative decision-making. Lessons encourage observation, interpretation, problem-solving, experimentation, and reflection while supporting the knowledge and skills outlined in the Texas standards.

Davis Digital extends this support through an integrated digital platform that brings instructional content, fine art images, assessment resources, and additional teaching materials together in one place. Translation functionality and a range of instructional supports help teachers respond to students' varied learning needs and create accessible learning experiences.

Davis Publications remains committed to developing high-quality art education materials that support Texas educators, align with the TEKS, and inspire students to develop their creativity, confidence, and lifelong appreciation for the visual arts.
