McGraw Hill appreciates the opportunity to respond to the Texas Resource Review (TRR) report for *Texas Science*. We are pleased that the Science TRR review has recognized the high quality of the McGraw Hill *Texas Science* suite of programs, including 100% TEKS and ELPS alignment.

Designed in partnership with teachers and administrators from across the state of Texas, McGraw Hill *Texas Science* brings science to life, both in the classroom and beyond, while it serves to prepare students for success on state assessments. The program was developed specifically around Texas-based phenomena with a deep commitment to meeting the expectations of the new TEKS/ELPS. *Texas Science* uses inquiry to lay the foundation for deep understanding in science and engineering, gives teachers and students what they need to develop and strengthen reading and writing skills, and ultimately cultivates a spirit of discovery that empowers students to master the TEKS and develop a lifelong love of learning.

McGraw Hill *Texas Science* is grounded in a TEKS-aligned scope and sequence that provides teachers with flexible options to differentiate instruction and modify pacing to fit their classroom and scheduling needs. With supportive guidance throughout, teachers can facilitate student-made connections across science concepts, recurring themes and concepts, and scientific and engineering practices. Robust assessment strategies, teacher support, and accommodations are included with the materials and are universal within the McGraw Hill platform. Parent and caregiver resources are included to help support student and family engagement with digital technology and success with science learning.

As a leader in science education, McGraw Hill strongly values our longstanding partnership with the State of Texas and with districts across the state. This shared commitment ensures that students and teachers have access to the highest quality materials. We appreciate that the quality of our made-for-Texas programs has been recognized and are prepared and committed to support McGraw Hill *Texas Science* and answer any inquiries regarding the Texas Resources Review that may facilitate your district adoption, evaluation, and implementation process. Please contact Tamara Childress (tamara.childress@mheducation.com) for more information.
